

Our Comply services

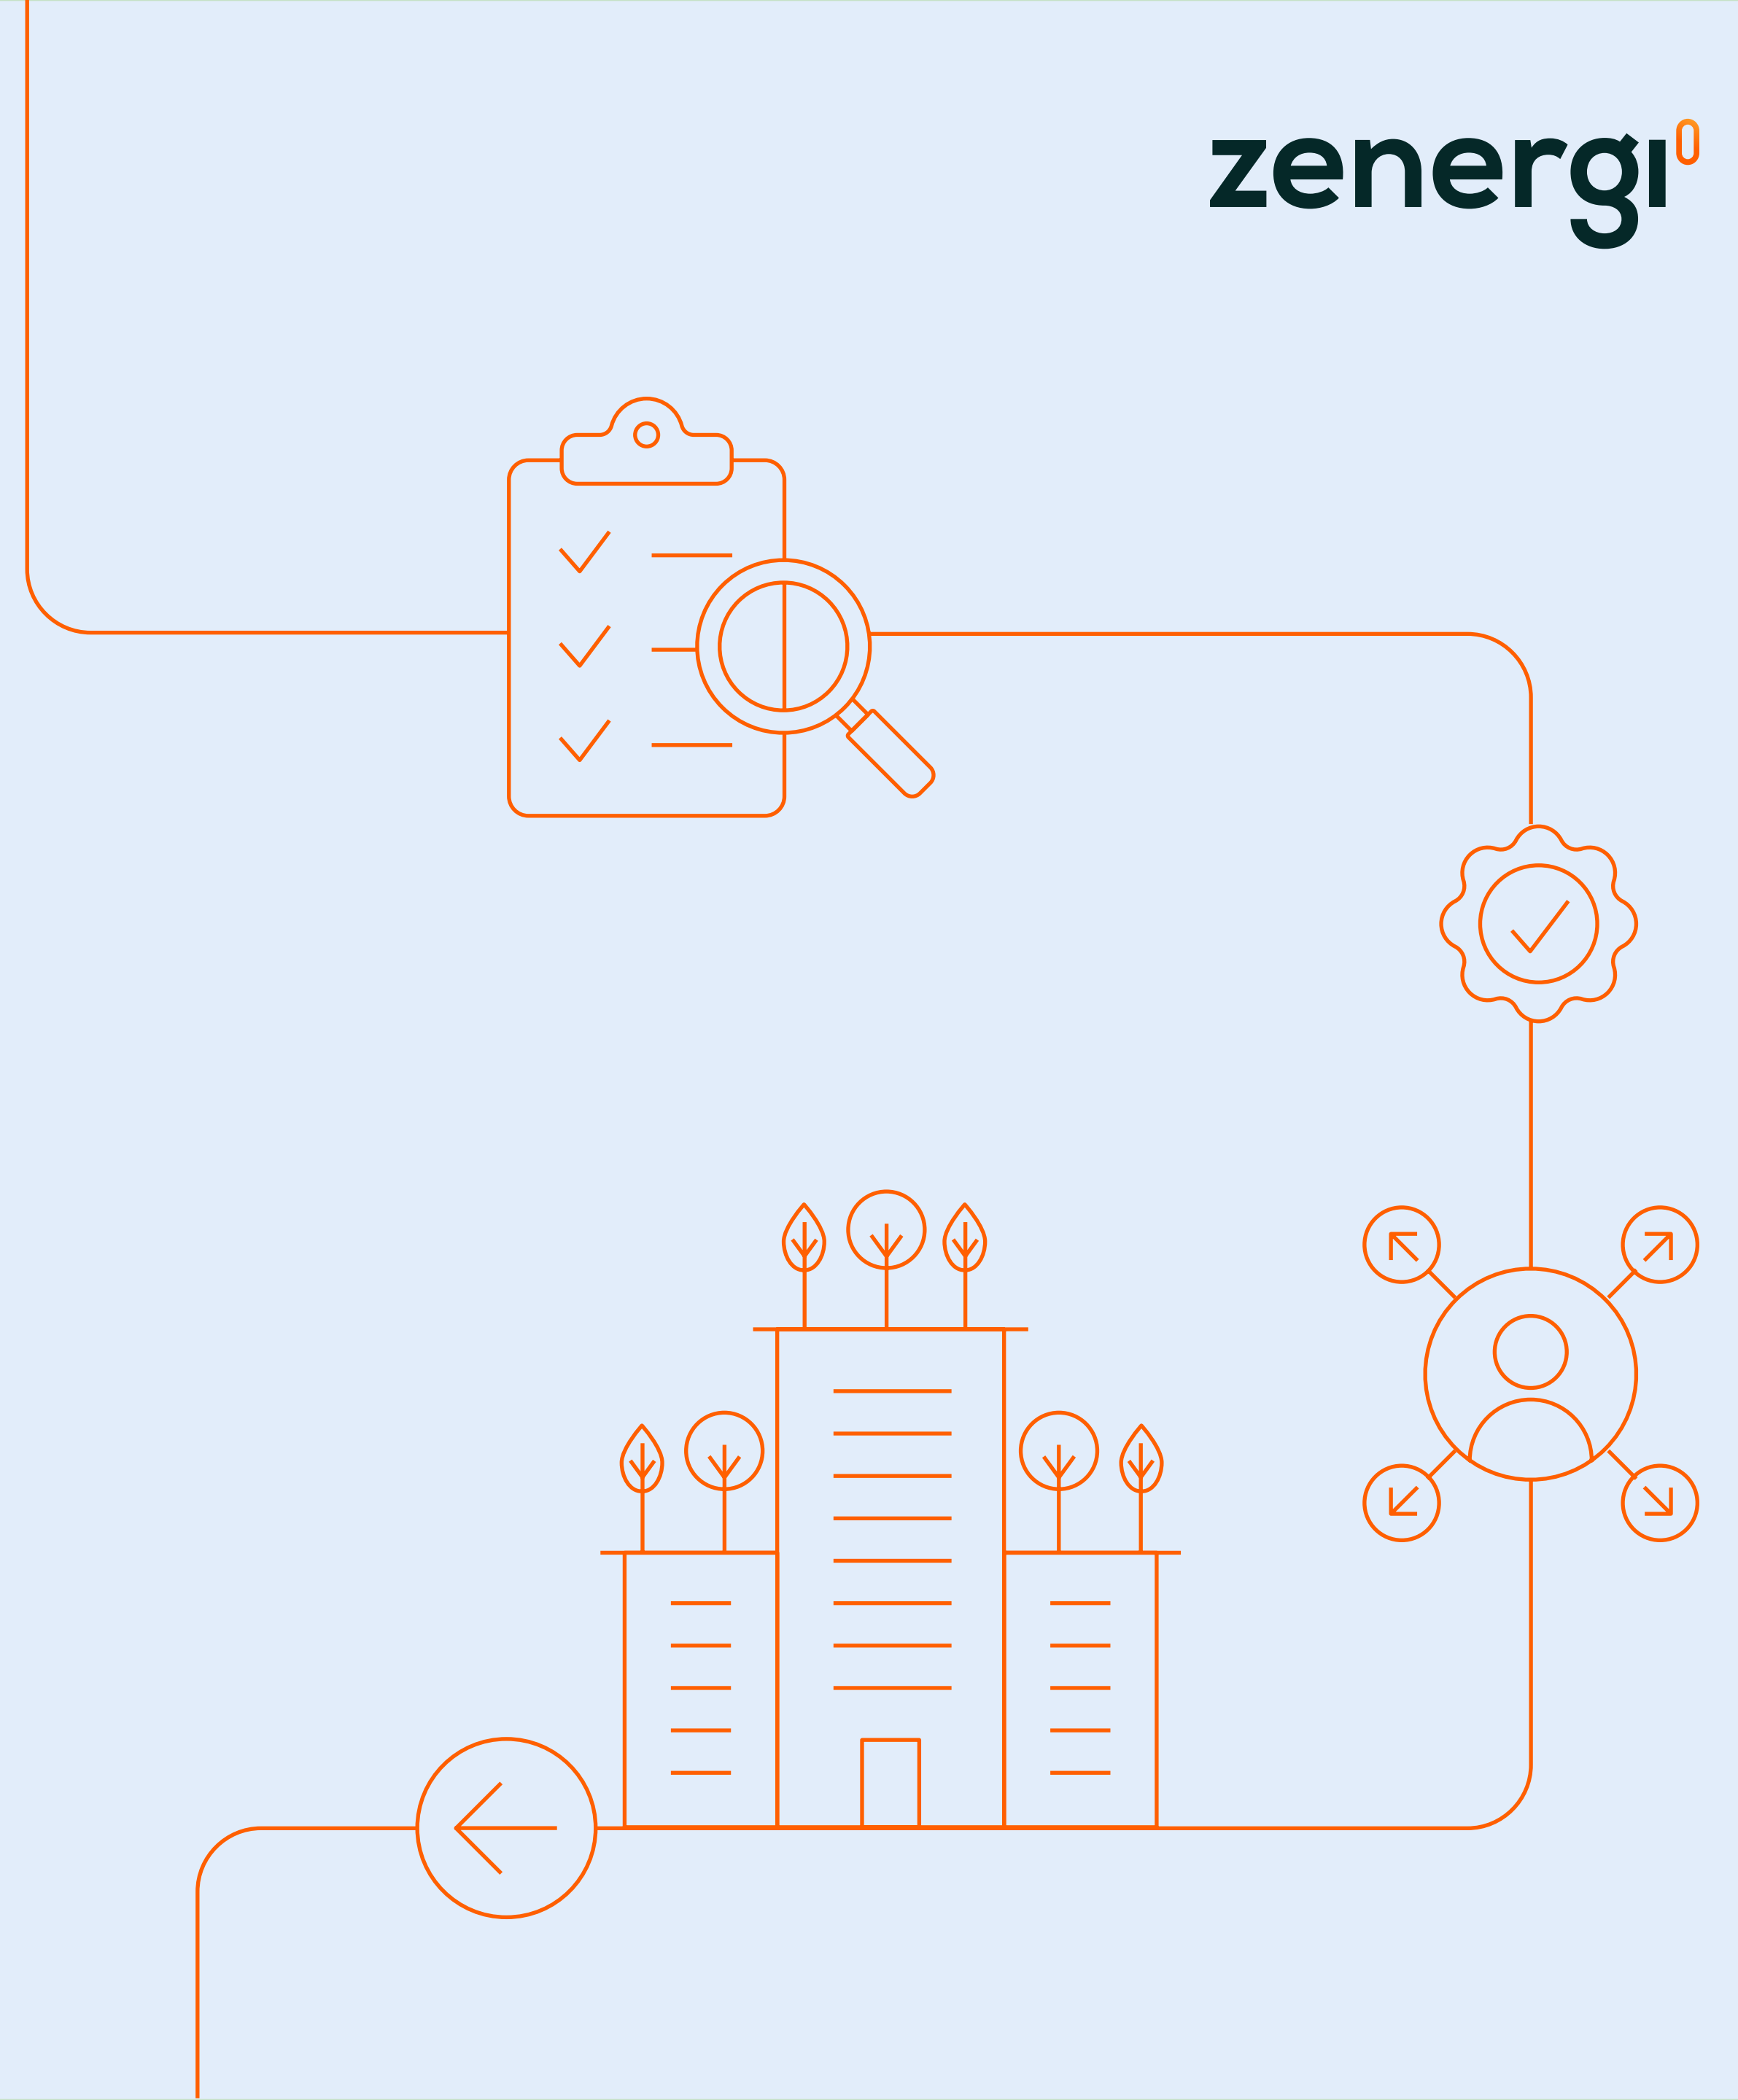

Fulfil your regulatory obligations and safeguard your future operations.

As the UK moves toward a net-zero future, organisations face increasing demands for compliance and certification.

New regulations and changing requirements, designed to track and reduce our energy and carbon consumption, are presenting more and more organisations with a rising tide of legislation. Inspections and certificates mark the beginning of an ongoing process of improvement, upgrades and optimisation, all subject to regular reviews.

Zenergi Comply helps you fulfil your environmental obligations and protect your future security and operational sustainability. Our team of experts will help you navigate the complex world of carbon compliance and reporting. **We'll help you understand your obligations and provide you with the tools and knowledge to meet them.**

Comply in three steps.

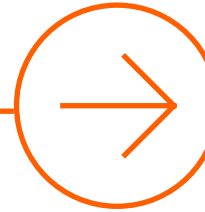

Inspect

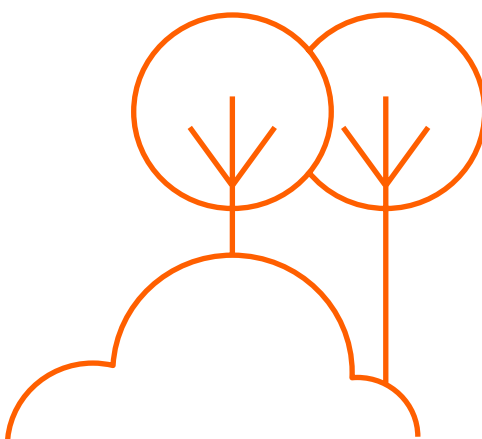

Our engineers, utility experts and data specialists inspect, measure and validate your environmental performance to ensure you meet prevailing UK standards and legislation. We fulfil your regulatory reviews and, wherever possible, streamline your reporting and compliance workload.

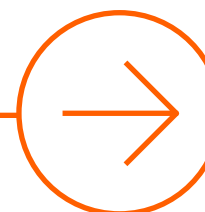

Certify

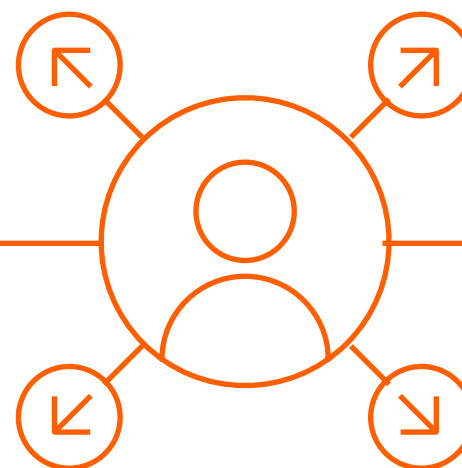

Your certifications and accreditation tell you—and the regulators—how well you are performing and where you need to improve. We identify how and where your organisation has opportunities to positively progress and significantly reduce your energy and carbon consumption and the associated costs.

Deliver

We advise you on the best ways to upgrade your performance and implement the practical steps you need to take. Our services enhance your buildings' energy efficiency and reduce the environmental impact of your infrastructure and processes. This maximises the value of improvements to your operational performance and resilience.

Solutions to keep you compliant.

Display Energy Certificates

Meet regulatory requirements and improve the energy efficiency of your buildings.

Navigate energy compliance effortlessly with our leading display energy certificates service. We all have a responsibility to reduce our energy use, which is why our service not only ensures public bodies meet their regulatory obligations but also helps to identify opportunities to save energy and money and reduce your carbon footprint.

Energy Performance Certificates

Maximise the value of your building through improved energy efficiency.

Ensuring a good energy rating is critical in this increasingly competitive environment. Our Energy Performance Certificate services go beyond mere compliance, offering a strategic approach to enhance the rental and saleable value of your buildings, while offering the opportunity to reduce tenants' exposure to rising energy costs.

Energy Savings Opportunity Scheme

Achieve compliance, while understanding your opportunities to improve energy efficiency and reduce costs.

Our comprehensive service manages the entire process, from data collection to reporting. With energy and carbon analysts calculating energy consumption and identifying areas for improvement and registered and qualified lead assessors on hand, you can achieve compliance, while improving energy efficiency and reducing costs.

Streamlined Energy and Carbon Reporting

Improve energy efficiency and remain compliant.

We help qualifying organisations identify how and where they are using the most energy and take care of the collation, calculations and reporting of energy consumption and carbon emissions for Scopes 1, 2 and 3. Our service not only ensures compliance but identifies energy efficiency measures that reduce greenhouse gas emissions.

Minimum Energy Efficiency Standards

Manage your route to an Asset Rating of B for all your properties by 2030.

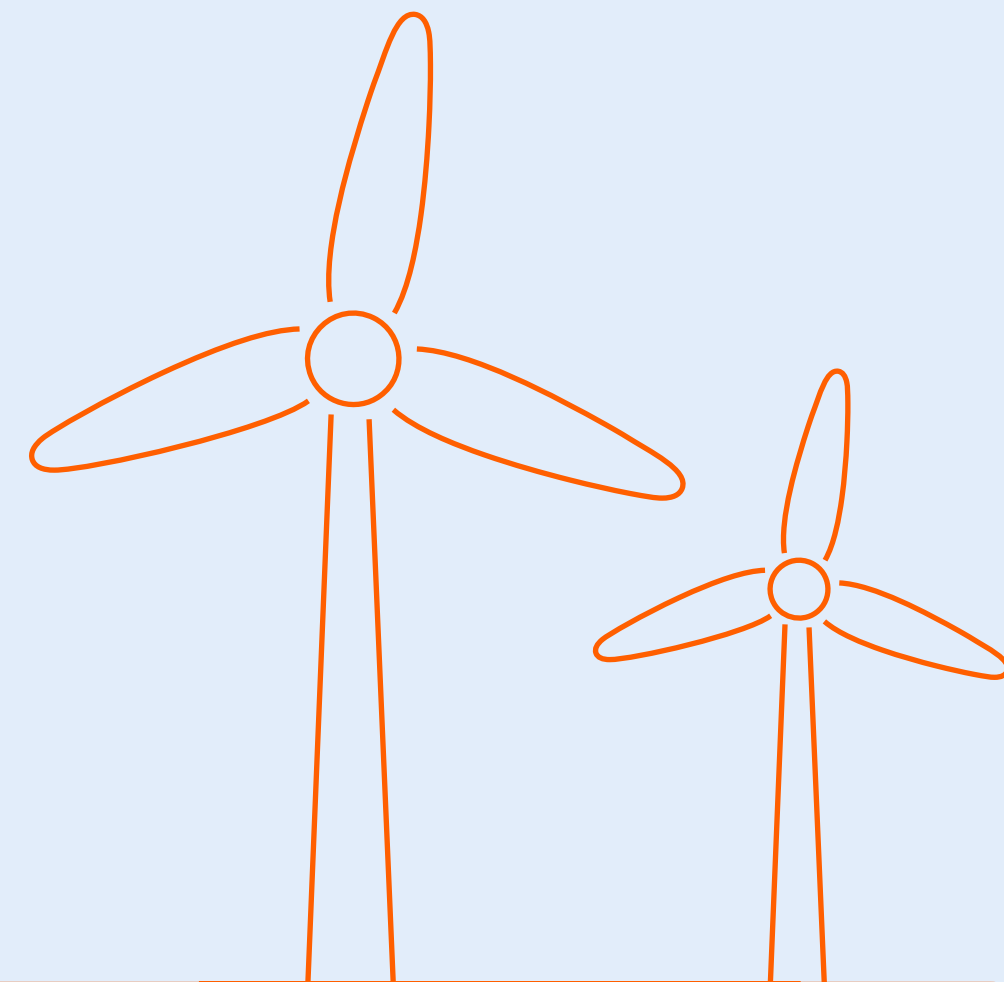

We can ensure compliance with Minimum Energy Efficiency Standards (MEES), guiding organisations to improve energy efficiency and avoid heavy fines. We manage the whole process from survey through to identifying and implementing cost-effective improvements to enhance the EPC rating, increase property value and ensure compliance.

TM44 Air Conditioning Inspections

Ensure compliance and optimise efficiency.

TM44 Air Conditioning Inspections ensure compliance and optimise efficiency by assessing air conditioning systems for efficiency, faults and cost-saving recommendations. The inspection helps avoid legal penalties and provides valuable data on energy usage, cost projections and recommendations for improving efficiency and reducing environmental impact. Our TM44 inspections will provide a return on investment if the recommendations are acted upon.

Our Comply services keep you up to date, compliant and operationally secure, while helping you maximise your energy and utility efficiency.

Zenergi provides an excellent service to our company. The team are very responsive, offering advice and acting quickly. I am very happy with the efficient service they give and would highly recommend them.”
