

## Energy Audits

**Identify and prioritise your energy saving opportunities.**

# Carry out a comprehensive review of the energy used across your sites with an Energy Audit.

Gain a clear insight into the areas where cost effective energy, operating and carbon savings can be achieved. The savings identified typically will cover the cost of the audit within a year.

**We can show you how.**

## Why an energy audit?

To meet the UK's net zero carbon target, organisations need to take decisive action in decarbonising their buildings. Energy audits can play a key role in identifying the path to reducing carbon emissions through a strategic plan of works, while delivering immediate cost savings. Building energy audits involve thorough investigation into all energy end users and can help you solve building performance issues – as well as reducing energy consumption, carbon emissions and operating costs.

## How cost-effective is it?

An audit typically identifies a range of practical low-cost and no-cost measures, together with a range of longer-term investment measures. The audit provides quantification of the costs, savings and estimated return on investment of each opportunity identified. The savings identified through low-cost and no-cost measures typically pay for the audit within a year.

## How it works

Our Energy Audit service always begins with an understanding of your goals. Our experienced consultants then gather all the energy consumption data relating to your building services and other energy users to understand the patterns and profile of consumption. Comprehensive site surveys are then undertaken with a focus on any agreed key areas to meet your objectives.

A detailed report is then produced including a project register of energy saving measures, itemising recommendations and setting strategies for implementation. This will provide insights into your energy consumption and allow the prioritisation of the identified energy saving measures. The report is followed up with advice around funding and implementation. If you choose to act on any recommendations, our in-house team of engineers and project managers are ready to help.

Identified energy savings typically cover the cost of an audit within a year.

## Key benefits

- Identify areas to reduce your energy consumption
- Identify efficiency defects with your equipment
- Get personalised recommendations to improve energy efficiency
- Reduce your carbon footprint
- Enjoy a fast payback through quick wins

“Zenergi provided peace of mind that our Trust was compliant with the new carbon reporting requirements of Streamlined Energy and Carbon Reporting. The support meant we didn't have to worry about the complexity of the data gathering or understanding what needed to be included in the report. The team was really easy to work with and took away the pain of needing to comply.”

Robert Kennington  
Director of Finance & Business,  
The Constellation Trust

# Want to discover more services to support your sustainability ambitions?

Our services are designed to make your life easier.

## Non-Half-Hourly Meter Exchanges

Soon, every organisation's electricity will need to be settled on a half-hourly basis so don't get left behind. If your meter is one of the circa 30 million affected, it will need to be upgraded.
