

Heat-as-a-Service

Accelerate your energy, cost and carbon reduction goals with a leased Heat Pump.

Heat-as-a-Service

It's difficult to transition from fossil-fuelled heating when the initial costs are prohibitive.

Our Heat-as-a-Service solution removes the financial barrier, allowing you to access a Heat Pump, with no up-front costs, just a monthly fee.

Our solution can help.

zenergi⁰

Heat Pumps can provide heating from 40°C up to 165°C and reduce your carbon emissions by up to 66%, compared to a gas boiler.

With our partner, Centrica, you can lease a Heat Pump, with repayments typically taking place over a term of 7-15 years. We offer a choice of five Heat Pump technologies to suit different budget and site requirements – air-source, ground-source, water-source, waste heat-source, or cascade.

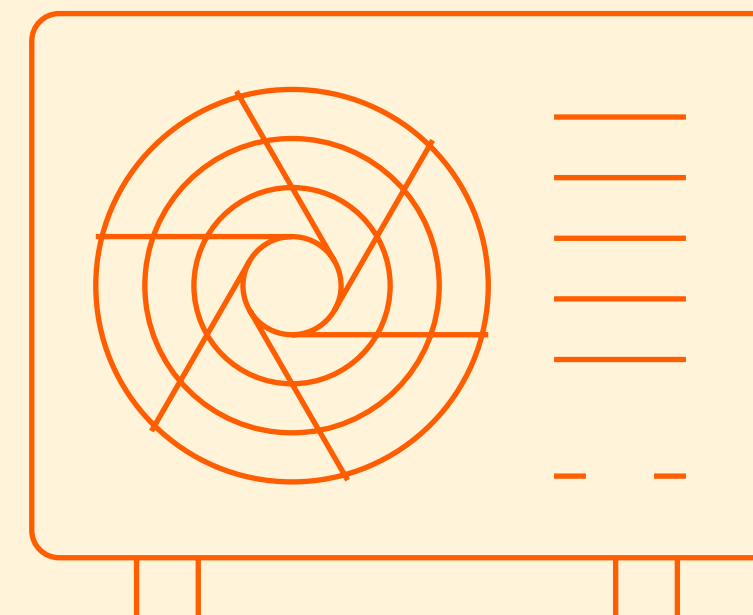

We also offer three different funding options, including a fixed monthly fee, a set p/kWh, or a combination of the two.

Complete Cover.

Complete Confidence.

Comprehensive maintenance is included, with a regular schedule of preventative maintenance to reduce the risk of faults and outages, rapid repairs should a fault occur, and remote performance monitoring.

This means you'll gain complete peace of mind, while benefitting from more energy-efficient heating and a lower carbon footprint.

Heat-as-a-Service

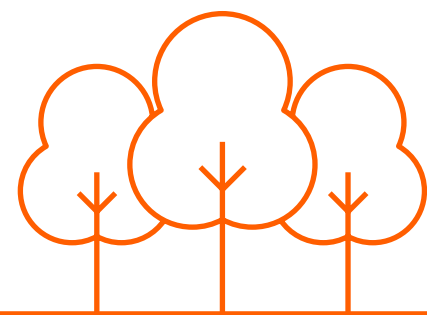

Key features

- Choice of five heat pump technologies
- Choice of three funding options
- Maintenance and repairs included
- Carbon neutral if powered by renewable energy

Key benefits

- Future-proof your site
- Improve energy efficiency
- Reduce your carbon footprint
- Transition away from fossil fuels
- Accelerate decarbonisation
- Support net zero goals

Want to explore more ways to reduce carbon emissions?

Our services are designed to help you.

EV Charging

Enjoy a seamless transition to an electric vehicle (EV) charging infrastructure, with a fully integrated plan that supports your needs now and in the future.

Solar PV Solutions

From feasibility studies to performance design, technical design, construction and handover, our comprehensive Solar PV Solutions service gives a smooth transition to clean, renewable energy.
