

Building Optimisation Audit

**Unlock energy efficiency
through intelligent building
performance insights.**

Hidden energy waste in your building could be adding unnecessary costs to your bills.

Many organisations face escalating energy bills, but lack visibility into what's really driving their energy use. Everyday oversights are easy to miss but quickly stack up.

We can help.

A Building Optimisation Audit goes beyond a standard Energy Audit. It focuses on how your building operates, identifying behavioural, technical and control-based inefficiencies that directly impact your energy use and costs.

We help you identify and prioritise practical, cost-effective improvements through a clear project register of energy-saving opportunities, backed by data and on-site findings. Each opportunity is assessed for cost, savings potential and payback, with many low- or no-cost actions delivering ROI within 12 months.

Why choose an optimisation audit?

Sustainability isn't just about reducing emissions. It's also about building long-term resilience and financial efficiency. Our audits do both – revealing hidden inefficiencies and recommending changes that cut costs and carbon emissions.

Uncover key improvement areas:

- Misaligned BMS and HVAC controls
- 24/7 operation of boilers and water heaters
- Overcooling in server rooms
- Lights, PCs, or equipment left running unnecessarily
- Open windows during heating/cooling

Get actionable insights to help you:

- Reduce energy bills
- Lower carbon emissions
- Enhance building performance
- Support your net zero or sustainability goals

Building Optimisation Audit

Key features

- Comprehensive building performance review
- Tailored on-site surveys to capture operational patterns and uncover hidden inefficiencies
- Data-driven insights using half-hourly data to detect usage trends and anomalies
- Project register of energy-saving measures provided with costs, savings and payback estimates detailed
- Focus on low- and no-cost opportunities
- Independent expert analysis

Key benefits

- Reduced energy bills
- Improved building efficiency
- Faster return on investment
- Lower carbon emissions
- Understand where and how energy is wasted and how to fix it
- Informed decision-making for strategic investments backed by real data and quantified impact
- Enhanced occupant comfort

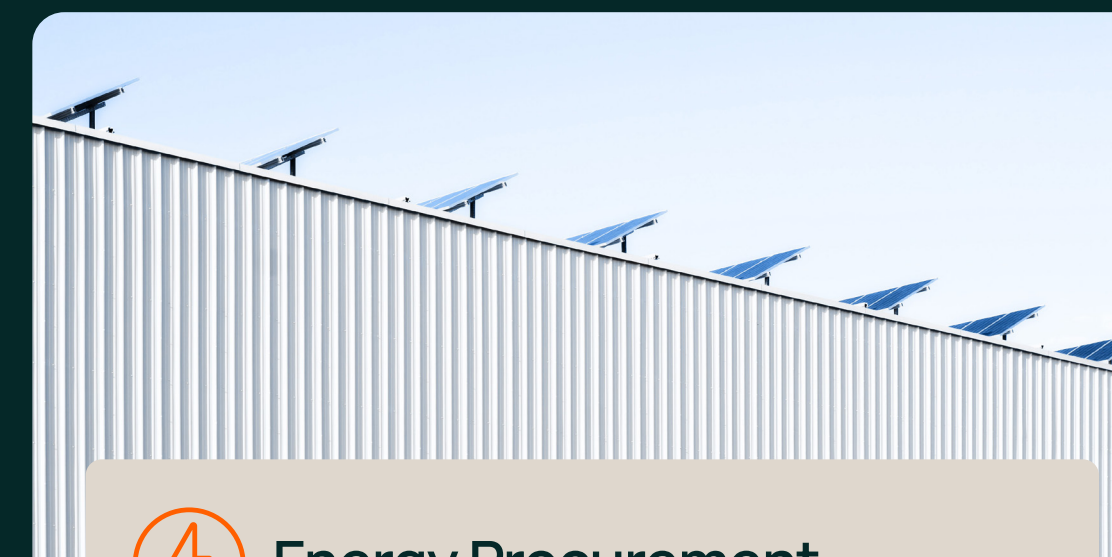

Interested in exploring other efficiency gains?

Consider these services for complete peace of mind.

Bill Validation

Identifying discrepancies in energy and water bills, ensuring the numbers are accurate and the correct rates are being applied. Any discrepancies are queried with suppliers and resolved with incorrect payments returned in full for complete peace of mind.

Energy Procurement

Take control of your energy costs – with support to choose the supplier, the contract length, and type of contract that supports both your energy needs and budget.
