

Carbon Footprint Measurement

Understand your emissions
so you can focus carbon
reduction where it counts.

Measure what matters. Reduce what counts.

When you need to understand, manage, and disclose your environmental impact to meet supply chain requirements and ESG goals, you need a fast, accurate, and reliable solution that turns complex emissions data into clear, actionable insight.

That's where we help

Today's competitive business landscape is increasing pressure to understand and report your greenhouse gas emissions.

But it remains a complex and resource-intensive task.

Your data is often fragmented across multiple systems, it can be difficult to obtain reliable inputs from suppliers, and keeping pace with evolving standards adds further complexity.

Our Carbon Footprint Measurement service delivers a complete, credible view of your organisation's carbon emissions across Scope 1, Scope 2 and all relevant Scope 3 categories.

Built on robust data and delivered through an interactive carbon accounting platform, you'll gain clarity on where emissions sit, so you'll know where reduction efforts will have the greatest impact.

Carbon Footprint Measurement

Getting started

Discovery and scope definition

We begin with a collaborative onboarding workshop to identify which Scope 3 categories are relevant to your organisation and introduce your dedicated Net Zero team.

- **Boundary review**

We define your organisational and operational boundaries, building a clear understanding of your business structure, sites, offices and facilities.

- **Data collection and calculation**

We coordinate and manage the collection of all relevant Scope 1, 2 and 3 data, which is uploaded into our carbon accounting platform for calculation, validation and visualisation.

- **Results and insights**

We present your final carbon footprint, providing clear insight into emissions sources and priority areas for action.

What you receive

Live online interactive dashboard

Secure access to your Scope 1, 2 and 3 carbon footprint via our market-leading carbon accounting platform.

- **Detailed data insights**

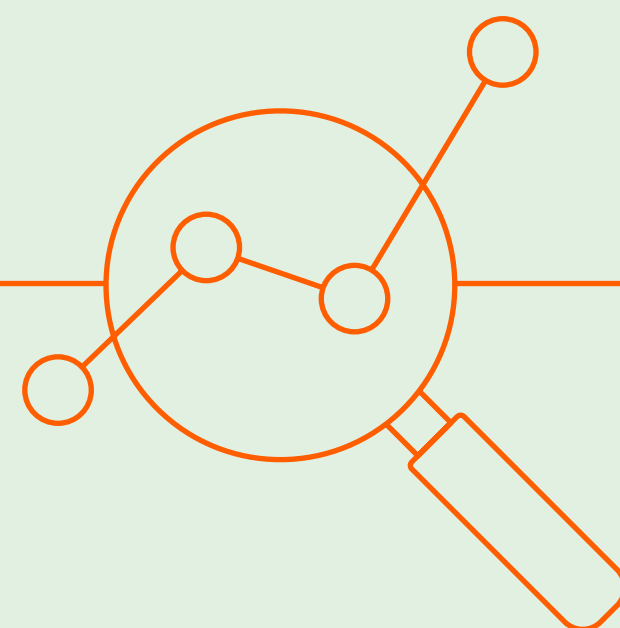

Explore emissions data in detail across all categories.

- **Flexible data export**

Export data outputs for reports, disclosures, audits and external communications.

- **Expert support**

Ongoing guidance from Zenergi's Net Zero team to ensure accurate calculations and confidence in your results.

Move from measurement to reduction with confidence

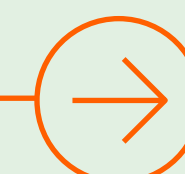

By centralising all emissions data within a single, secure carbon accounting platform, our solution creates a single source of truth for your carbon footprint.

You'll eliminate inconsistencies and human error caused by multiple spreadsheets, versions and manual calculations.

Emissions are calculated using consistent methodologies and quality checks, giving you greater accuracy, transparency and confidence in your results.

With real-time insights and intuitive visual dashboards, you can quickly understand where your emissions reduction will have the greatest impact.

The platform also supports audit-ready reporting, allowing data to be easily exported, when you need it, how you need it.

A streamlined process to measure, report and reduce your Scope 1, 2 and 3 greenhouse gas emissions.

Carbon Footprint Measurement

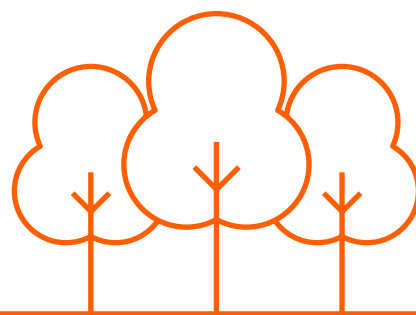

Key features

- Data visualised in interactive carbon accounting platform
- Fast export of data when you need it for reports, disclosures, audits and communications
- Automated data calculation
- Real-time data reporting

Key benefits

- Understand your Scope 1,2 and 3 emissions across your full value chain
- Use interactive dashboards to understand where reductions will have the greatest impact
- Eliminate errors and inconsistencies from manual data processing and calculations
- Improve operational efficiency
- Gain a trusted, reliable and actionable carbon footprint

Want to explore more ways to
reduce carbon emissions?
Our services are designed to help you.

Heat as a Service

Our Heat-as-a-Service solution removes the financial barrier, allowing you to access a Heat Pump, with no up-front costs, just a monthly fee.

LED Lighting

Enjoy brighter, more consistent light and improve the overall working environment, while cutting your costs by up to 50%, with a lighting upgrade.
